R744

Naturally Cool

The right spec...

Commercial and industrial refrigeration applications, as well as air conditioning systems require a high purity product to prevent corrosion due to carbonic acid. Praxair R744 grade CO2 is of a 99.9% minimum purity and has a reliably low moisture content of just 10 parts per million.

Specification	
Purity	99.9% min
Water	10 ppm by weight

The right alternative....

At Praxair, we understand our customers' need for an efficient, environmentally considerate refrigerant – and R744 (Carbon Dioxide) fits the bill. R744 is a nonflammable, low- toxicity alternative to traditional fluorine based refrigerants, like R134a. With Zero ozone depletion potential and a GWP (Global Warming Potential) of 1, R744 is the natural choice.

Whether your application is commercial refrigeration, process chilling or mobile air conditioning – your Praxair representative can provide you with the right product & the right package to suit your needs.
